GANJI ANIRUDH

Full Stack Developer & AI/ML Enthusiast

PROFILE SUMMARY

Passionate 2nd-year B.Tech Computer Science student at SR University with strong foundation in full-stack web development, machine learning, and AI. Experienced in building responsive web applications using React, Node.js, and Python. Actively participates in hackathons and builds real-world projects. Open to internships, collaborations, and opportunities in the tech industry.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science

Aug 2024 – 2028

SR University, Warangal, Telangana

TECHNICAL SKILLS

Languages Python, JavaScript, C, HTML5, CSS3

Frontend React.js, Vue.js, Tailwind CSS, HTML5, CSS3, Responsive Design

Backend Node.js, Express.js, FastAPI, REST APIs

Databases MongoDB, SQL

AI / ML TensorFlow, Keras, scikit-learn, Pandas, NumPy, Matplotlib, SciPy, Plotly, YOLOv8, OpenCV

Tools Git, GitHub, Figma, Postman, Power BI, Jupyter Notebook, Linux

PROJECTS

AyuLink – Smart Health. Zero Boundaries.

Apr 2026

TypeScript, C, IoT

- Built a unified healthcare infrastructure platform enabling real-time patient monitoring without internet using mesh-based hardware devices.
- Seamlessly connects patients, doctors, and families across rural and urban areas for faster emergency response and 24/7 health tracking.

fight-club-ht-01.vercel.app/

Real-Time Traffic Intelligence & Analysis System

Apr 2026

Python, YOLOv8, OpenCV, PaddleOCR, NumPy, Flask

- Developed a system that transforms live camera feeds into actionable traffic insights using advanced AI models and Computer Vision techniques.
- Implemented real-time vehicle detection, accurate speed estimation via homography, and License Plate Recognition.

github.com/anirudh1261/Real-time-traffic-analysis

OrbitGuard

Mar 2026

Python, Flask, JavaScript, Globe.gl, Skyfield, REST APIs

- Built a Space Situational Awareness system that fetches real satellite data to predict and visualize future satellite positions on an interactive 3D globe.
- Engineered real-time simulation with updates every 1.5 seconds and collision detection capabilities.

github.com/anirudh1261/OrbitGuard

Digit Recognition with Drawing UI

Mar 2026

Python, TensorFlow, Keras, CNN, Tkinter, NumPy, Matplotlib

- Built an interactive AI application with a real-time drawing canvas connected to a trained CNN model.
- Users draw digits on the canvas and the model instantly predicts the number using the MNIST dataset.

github.com/anirudh1261/digit-recognition-with-drawing-ui

Handwritten Digit Classification

Feb – Mar 2026

Python, TensorFlow, NumPy, Matplotlib, Scikit-Learn, Jupyter Notebook

- Built a machine learning model to classify handwritten digits (0–9) using the MNIST dataset (70,000 images).
- Achieved ~99% prediction accuracy with comprehensive model evaluation.

github.com/anirudh1261/HandWrittenDigits_Classification-main

Cyberattack Detection using Machine Learning

Feb – Mar 2026

Python, Machine Learning, Pandas, Scikit-learn, Tkinter

- Analyzed cybersecurity data and trained a machine learning model to predict potential cyberattacks.
- Developed a Python-based UI application to interact with the trained model for real-time predictions.

github.com/anirudh1261/cyberattack-detection-ml

WiFi Cracker

Feb 2026

Python, Linux, Network Security

- Developed a command-line based tool to demonstrate wireless network security and analyze vulnerabilities in WiFi protocols.
- Implemented features like scanning networks, capturing handshakes, and performing security testing on WPA/WPS networks.

github.com/anirudh1261/WiFi-Cracker

Mini Music Player

Jan – Feb 2026

HTML, CSS, JavaScript

- Developed a lightweight, responsive media player with play/pause/seek controls and dynamic media loading.
- Clean, cross-browser compatible UI with smooth interaction and DOM manipulation.

github.com/anirudh1261/mini-player-master
